PROFESSIONAL SUMMARY

Python Software Engineer with over 4 years of experience building scalable backend architectures and high-performance automation solutions. Specialized in designing distributed systems using Flask/Django and RabbitMQ/Celery, managing hybrid databases (SQL/NoSQL), and optimizing complex data pipelines. Proven track record of developing internal tools that reduce operational costs and creating robust architectures for financial and marketing applications. Tech enthusiast with a personal homelab (Proxmox/Docker) focused on continuous learning in DevOps and Infrastructure.

TECHNICAL SKILLS

- Languages: Python (Advanced), SQL, JavaScript, HTML5/CSS3.
- Frameworks & Libraries: Flask, Django, REST APIs, Celery, Pandas, Pytest.
- Infrastructure & Tools: AWS (EC2, S3), Docker, RabbitMQ, Linux, Proxmox, Git/GitHub.
- Databases: MySQL (Relational), PostgreSQL, MongoDB (NoSQL).
- Automation & QA: Selenium WebDriver, RPA, Web Scraping, Anti-Bot Strategies.
- Config & Observability: YAML, JSON, Jinja2, Log Analysis, Production Support.

PROFESSIONAL EXPERIENCE:

Netbiis | Data Driven Technologies — Hybrid
Software Engineer (Python & Automation) | Sep 2024 – May 2026

- Production Support & Troubleshooting: Provided active L3 support for critical automation pipelines, analyzing logs to identify root causes of failures and ensuring high system availability.
- Internal Tooling (Flask & SQL): Spearheaded the full-stack development of a custom web application to orchestrate data validation, optimizing complex SQL queries for high-volume data segmentation.
- Workflow Architecture: Designed end-to-end automation workflows in Adobe Campaign, applying backend logic to optimize audience personalization.

Independent Consultant (HG7, Plug, ExportSul) — Hybrid
Backend Software Engineer & Consultant | Jan 2021 – Aug 2024
Acting as a Lead Developer delivering enterprise-grade solutions for corporate clients:

- AI/ML Integration: Engineered backend pipelines to integrate AI models into business workflows via REST APIs, handling data preprocessing and storage for machine learning applications.
- Cloud Infrastructure (AWS): Deployed and managed containerized applications on AWS (EC2) and configured S3 buckets for secure storage of ETL artifacts.
- Distributed Systems (Client: Plug): Architected a centralized REST API using Flask, RabbitMQ, and Celery to manage asynchronous task queues.
- Financial System (Client: HG7): Built a full-stack financial management system (DRE) using Python and Vue.js.

PLUG TECNOLOGIA — São Paulo
Python Developer (Intern) | Aug 2022 – Feb 2024
Core contributor to the engineering team, designing scalable backend solutions.

- Core contributor to the engineering team, designing scalable backend solutions.
- Designed and implemented asynchronous task queues using Celery and RabbitMQ to handle background processing.
- Managed hybrid data storage strategies using MySQL for transactional data and MongoDB for unstructured scraped data.
- Developed secure internal web applications using Django and Flask to visualize key business metrics.

Microcamp Tecnologia — São Paulo
Tech Instructor (Logic & Algorithms) | Oct 2021 – Feb 2022

- Mentored over 50 students in programming logic, algorithms, and computer architecture.
- Developed strong communication skills by translating complex technical concepts into accessible knowledge for students.

EDUCATION
Bachelor of Computer Engineering
Impacta Tecnologia | Expected Graduation: 2027

LANGUAGES
- Portuguese: Native
- English: Advanced (High proficiency in Reading/Writing/Documentation)
